

Mark Scheme

Specimen Set 1

Pearson Edexcel GCSE In Computer Science  
(1CP2)  
Paper 01: Principles of Computer Science

## **Edexcel and BTEC Qualifications**

Edexcel and BTEC qualifications are awarded by Pearson, the UK's largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at [www.edexcel.com](http://www.edexcel.com) or [www.btec.co.uk](http://www.btec.co.uk). Alternatively, you can get in touch with us using the details on our contact us page at [www.edexcel.com/contactus](http://www.edexcel.com/contactus).

## **Pearson: helping people progress, everywhere**

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: [www.pearson.com/uk](http://www.pearson.com/uk)

Question number	Answer	Additional guidance	Mark
6	<p>Award marks as shown.</p> <p>Points-based mark scheme:</p> <p><b>Inputs</b></p> <ul style="list-style-type: none"> <li>• Accepts four inputs, disregard conversion (1)</li> <li>• Validation with range check using relational operators <math>1 \leq \text{month} \leq 12</math> (1)</li> </ul> <p><b>Process</b></p> <ul style="list-style-type: none"> <li>• Correct subprogram call (1) to generate identifier or to do linear search</li> <li>• Builds and appends a correctly formatted record to members list (1)</li> <li>• Use of indexing (1) to access fields in members list</li> </ul> <p><b>Outputs</b></p> <ul style="list-style-type: none"> <li>• [6.4.1] Display of at least one appropriate message (1)</li> </ul> <p>Levels-based mark scheme to a maximum of 9, from:</p> <ul style="list-style-type: none"> <li>• Solution design (3)</li> <li>• Good programming practices (3)</li> <li>• Functionality (3)</li> </ul>	<ul style="list-style-type: none"> <li>• Range checks may be constructed in different ways, e.g. <math>0 &lt; \text{month} &lt; 13</math>.</li> <li>• Subprogram call must match subprogram header, i.e. order and type of arguments must match order and type of parameters expected.</li> <li>• Record appended to members table must follow format of table entries, i.e. fields must be in the right order.</li> </ul> <p>Considerations for levels-based mark scheme:</p> <ul style="list-style-type: none"> <li>• [6.1.2] Write in a high-level language</li> <li>• [6.2.2] Main program code is laid out in clear sections; white space is used to show different parts of the solution/functionality; variable names are meaningful; comments are provided and are helpful;</li> <li>• [6.2.2] Use sequencing and selection components</li> <li>• [6.4.1] Messages match result of range tests, result of linear search, or result of adding a new member</li> <li>• [6.1.6] Functions correctly for all of the cases, e.g. month too small,</li> </ul>	(15)

		<p>month too large, year too small, year too large, ID already in members, ID needs to be added</p> <ul style="list-style-type: none"><li>• [6.5.3] Use of Boolean operators (AND, OR) to create compound tests for range validations / use 'not in range'</li><li>• [6.1.1] Use decomposition and abstraction to analyse a problem (inputs, outputs, processing, initialisation, design)</li><li>• [6.6.1] Decompose into subproblems</li><li>• [6.2.2] Use of 'for' loop to iterate over a data structure, rather than a 'while' loop is acceptable, although the more efficient and effective solution is to use a 'while' and stop the loop if duplicate found.</li><li>• [6.3.1] Conversion of input types to those required by program, e.g. two strings and two integers</li></ul>	
--	--	---	--

**Solution design (levels-based mark scheme)**

0	1	2	3	Max.
<i>No rewardable material</i>	<ul style="list-style-type: none"> <li>• There has been little attempt to decompose the problem.</li> <li>• Some of the component parts of the problem can be seen in the solution, although this will not be complete.</li> <li>• Some parts of the logic are clear and appropriate to the problem.</li> <li>• The use of variables and data structures, appropriate to the problem, is limited.</li> <li>• The choice of programming constructs, appropriate to the problem, is limited.</li> </ul>	<ul style="list-style-type: none"> <li>• There has been some attempt to decompose the problem.</li> <li>• Most of the component parts of the problem can be seen in the solution.</li> <li>• Most parts of the logic are clear and appropriate to the problem.</li> <li>• The use of variables and data structures is mostly appropriate.</li> <li>• The choice of programming constructs is mostly appropriate to the problem.</li> </ul>	<ul style="list-style-type: none"> <li>• The problem has been decomposed clearly into component parts.</li> <li>• The component parts of the problem can be seen clearly in the solution.</li> <li>• The logic is clear and appropriate to the problem.</li> <li>• The choice of variables and data structures is appropriate to the problem.</li> <li>• The choice of programming constructs is accurate and appropriate to the problem.</li> </ul>	<b>3</b>

**Good programming practices (levels-based mark scheme)**

0	1	2	3	Max.
<i>No rewardable material</i>	<ul style="list-style-type: none"> <li>• There has been little attempt to lay out the code into identifiable sections to aid readability.</li> <li>• Some use of meaningful variable names.</li> <li>• Limited or excessive commenting.</li> <li>• Parts of the code are clear, with limited use of appropriate spacing and indentation.</li> </ul>	<ul style="list-style-type: none"> <li>• There has been some attempt to lay out the code to aid readability, although sections may still be mixed.</li> <li>• Uses mostly meaningful variable names.</li> <li>• Some use of appropriate commenting, although may be excessive.</li> <li>• Code is mostly clear, with some use of appropriate white space to aid readability.</li> </ul>	<ul style="list-style-type: none"> <li>• Layout of code is effective in separating sections, e.g. putting all variables together, putting all subprograms together as appropriate.</li> <li>• Meaningful variable names and subprogram interfaces are used where appropriate.</li> <li>• Effective commenting is used to explain logic of code blocks.</li> <li>• Code is clear, with good use of white space to aid readability.</li> </ul>	<b>3</b>

**Functionality (levels-based mark scheme)**

0	1	2	3	Max.
<i>No rewardable material</i>	<p><b>Functionality (when the code is run)</b></p> <ul style="list-style-type: none"> <li>• The component parts of the program are incorrect or incomplete, providing a program of limited functionality that meets some of the given requirements.</li> <li>• Program outputs are of limited accuracy and/or provide limited information.</li> <li>• Program responds predictably to some of the anticipated input.</li> <li>• Solution is not robust and may crash on anticipated or provided input.</li> </ul>	<p><b>Functionality (when the code is run)</b></p> <ul style="list-style-type: none"> <li>• The component parts of the program are complete, providing a functional program that meets most of the stated requirements.</li> <li>• Program outputs are mostly accurate and informative.</li> <li>• Program responds predictably to most of the anticipated input.</li> <li>• Solution may not be robust within the constraints of the problem.</li> </ul>	<p><b>Functionality (when the code is run)</b></p> <ul style="list-style-type: none"> <li>• The component parts of the program are complete, providing a functional program that fully meets the given requirements.</li> <li>• Program outputs are accurate, informative, and suitable for the user.</li> <li>• Program responds predictably to anticipated input.</li> <li>• Solution is robust within the constraints of the problem.</li> </ul>	<b>3</b>
